
UNIVERSITY OF TEXAS AT AUSTINSubjective expectations.

Problem 4.1. IFM Sample (Introductory) Problem #6.

The following relates to one share of XYZ stock:

- The current price is 100.
- The forward price for delivery in one year is 105.
- An investor who decides to long the forward contract denotes by P the expected stock price in one year.

Determine which of the following statements about P is **TRUE**.

- (A) $P < 100$
- (B) $P = 100$
- (C) $100 < P < 105$
- (D) $P = 105$
- (E) $P > 105$

Problem 4.2. IFM Sample (Introductory) Problem #38.

The current price of a medical company's stock is 75. The expected value of the stock price in three years is 90 per share. The stock pays no dividends. You are also given:

- The risk-free interest rate is positive.
- There are no transaction costs.
- Investors require compensation for risk.

The price of a three-year forward on a share of this stock is X , and at this price an investor is willing to enter into the forward. Determine what can be concluded about X .

- (A) $X < 75$
- (B) $X = 75$
- (C) $75 < X < 90$
- (D) $X = 90$
- (E) $X > 90$

Problem 4.3. IFM Sample (Introductory) Problem #70.

Investors in a certain stock demand to be compensated for risk. The current stock price is 100. The stock pays dividends at a rate proportional to its price. The dividend yield is 2%. The continuously compounded risk-free interest rate is 5%. Assume there are no transaction costs.

Let X represent the expected value of the stock price 2 years from today. Assume it is known that X is a whole number. Determine which of the following statements is true about X .

- (A) The only possible value of X is 105.
- (B) The largest possible value of X is 106.
- (C) The smallest possible value of X is 107.
- (D) The largest possible value of X is 110.
- (E) The smallest possible value of X is 111.
