

## UNIVERSITY OF TEXAS AT AUSTIN

Quiz #6

## European calls.

Provide your final answer only to the following problem(s):

**Problem 6.1.** (5 points) Which of the following constitutes a one-year, \$100-strike **covered call**?

- (a) Write a one-year, \$100-strike call and short the underlying asset.
- (b) Write a one-year, \$100-strike call and buy the underlying asset.
- (c) Buy a one-year, \$100-strike call and short the underlying asset.
- (d) Buy a one-year, \$100-strike call and buy the underlying asset.
- (e) None of the above.

---

Please, provide the complete solution to the following problem(s):

**Problem 6.2.** (5 points) The premium on a 1000-strike, 2-month European call option on the market index is \$20. After 2 months the market index spot price is 1075. If the risk-free interest rate equals 0.5% effective per month, what is the long-call profit?

**Problem 6.3.** (5 points) The fair price today of a zero-coupon bond with redemption amount of \$100 and which comes to maturity in a year is equal to \$78.

You purchase an at-the-money European call option on a non-dividend paying stock whose price today is  $S(0) = \$100$ . The premium of this call was \$10.

Write the expression for this call's payoff, and for its profit (valued at its expiration date  $T$ ) as a function of  $S(T)$  (the stock price at time  $T$ ) and the time of maturity  $T$ .
