Cubic Splines.

$$b_1(x) = x$$

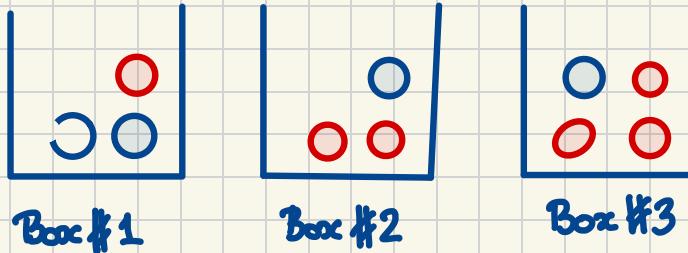

$$b_2(x) = x^2$$

$$b_3(x) = x^3$$

Inspiration.

Example. Which Box?

Q: $\text{P}[\text{Box } \#i \mid \text{Red}] =$ $i = 1, 2, 3$

$$= \frac{\text{P}[\text{Box } \#i \cap \text{Red}]}{\text{P}[\text{Red}]}$$
$$= \frac{\text{P}[\text{Box } \#i] \cdot \text{P}[\text{Red} \mid \text{Box } \#i]}{\sum_{j=1}^3 \text{P}[\text{Box } \#j] \cdot \text{P}[\text{Red} \mid \text{Box } \#j]}$$

Bayes Theorem

Making a modeling choice.

$$\text{P}[\text{Box } \#i] = \frac{1}{3}$$

$$\frac{\frac{1}{3} \left(\begin{array}{c} \vdots \\ () \end{array} \right)}{\frac{1}{3} \left(\begin{array}{c} + + \end{array} \right)}$$

$$\text{P}[\text{Box } \#i] = \frac{\text{# marbles in } \#i}{\text{total # marbles}}$$
