

## **Advanced Derivatives Questions**

- 1. Consider a European call option and a European put option on a nondividend-paying stock. You are given:
  - (i) The current price of the stock is 60.
  - (ii) The call option currently sells for 0.15 more than the put option.
  - (iii) Both the call option and put option will expire in 4 years.
  - (iv) Both the call option and put option have a strike price of 70

Calculate the continuously compounded risk-free interest rate.

(A) 0.039
(B) 0.049
(C) 0.059
(D) 0.069
(E) 0.079

(E) 0.079

(C) 
$$\frac{1}{1}$$
(C)  $\frac{1}{1}$ 
(D)  $\frac{1}{1}$ 
(E)  $\frac{1}{1}$ 
(B) 0.049
(C) 0.059
(C)  $\frac{1}{1}$ 
(C)

## 77. You are given:

- i) The current price to buy one share of XYZ stock is <u>500</u>.
- ii) The stock does not pay dividends.
- iii) The continuously compounded risk-free interest rate is 6%.
- iv) A European call option on one share of XYZ stock with a strike price of *K* that expires in one year costs 66.59.
- v) A European put option on one share of XYZ stock with a strike price of *K* that expires in one year costs 18.64.

Using put-call parity, calculate the strike price, K.

$$(A) \quad 449 \qquad \qquad V_{c}(o) - V_{p}(o) = 3(o) - PV_{o,T}(k)$$

$$66.59 - 18.64 = 5\infty - Ke^{-0.06}$$

$$(B) \quad 452$$

$$(C) \quad 480$$

$$(D) \quad 559$$

$$(E) \quad 582$$

$$(D) \quad 582$$

$$(E) \quad 582$$

78. The current price of a non-dividend paying stock is 40 and the continuously compounded risk-free interest rate is 8% You are given that the price of a 35-strike call option is 3.35 higher than the price of a 40-strike call option, where both options expire in 3 months.

Calculate the amount by which the price of an otherwise equivalent 40-strike put option exceeds the price of an otherwise equivalent 35-strike put option.
