M339J/M389J Syllabus

M339J/M389J: Probability Models Actuarial with Applications - Spring 2023 - Syllabus

COURSE-SPECIFIC INFORMATION

Welcome to M339J/M389J! Here is some information and some ground rules. Read carefully and let me know if there is anything unclear by the twelfth day of classes, i.e., January 25th, 2023.

Basic info Course number. M339J (unique: 54730)

Course meets. MWF 11am - 11:50am in PMA 5.122

Instructor. Milica Čudina (she/her/hers); my office is PMA 13.142 (2515 Speedway, Austin, TX 78712).

Email. It's best to use Canvas to email the instructor. The instructor's email address is mcudina@math.utexas.edu.

Office Hours. MWF 10am-10:50am in PMA 13.142.

Course description. This course is intended to provide the mathematical foundations necessary to prepare for a portion of the SOA Exam FAM. Additionally, the course is aimed at building the vocabulary and the techniques indispensable in the workplace at current insurance

Course info

exam. The material exhibited includes: basic insurance and re-insurance, severity- and frequency-of-loss models, compound models, parametric and non-parametric estimation, maximum-likelihood estimation, credibility.

The remainder of the Exam FAM curriculum is exhibited in courses M339D and M339U (also offered by the Department of Mathematics). Learning outcomes.

• Familiarity with the basics of the programming language R and the RStudio IDE. • Using R to simulate random variables.

- Understanding the stipulations of common insurance contracts useful in every-day life, including coverage modifications (deductibles, limits, coinsurance).
- Learning to build probabilistic models based on real-life problems with particular focus on short term insurance.

find this tab along the left side navigation in Canvas.

- Gaining competency in choosing appropriate probabilistic models for the applications mentioned above including, but not limited to, parameter value choice. • Becoming versed in calculating the expected aggregate payments in the presence of coverage modifications for a variety of model
- choices as the first step towards policy pricing.
- Estimating parameters using maximum likelihood estimation. Implementing non-parametric estimation techniques in survival analysis.
- Prerequisites. The formal prerequisite is the grade C- or better in M362K and M358K (or M378K). Students are assumed to be at home with the basics of probability as presented in, e.g., Ross's First Course in Probability, Pitman's Probability or Asimow and Maxwell's Probability and Statistics with Applications.
- Students are **not** assumed to have any prior programming experience and the basics of R will be covered from scratch. It should be stressed that this course is more sophisticated mathematically than is evident at first glance. I want you to be successful in this

course, and for that to happen, a thorough understanding of probability. Lectures online. This class is using the Lectures Online recording system. This system records the audio and video material presented in class for you to review after class. Links for the recordings will appear in the Lectures Online tab on the Canvas page for this class. You will

To review a recording, simply click on the Lectures Online navigation tab and follow the instructions presented to you on the page. You can learn more about how to use the Lectures Online system at http://sites.la.utexas.edu/lecturesonline/students/how-to-access-recordings/.

recommended. In case you need to be absent, you are responsible for covering the missed material independently. Class notes will be provided on the course website. As noted above, we will be using the Lectures Online recording system. There will be no synchronous online option for this course. You are strongly encouraged to stay home if you are sick or contagious, not only to stop the spread of disease but also to promote your personal wellness. I view this class as a community of learners. We cannot learn effectively when we are ill. Please, take care

Class format and attendance. Attendance for the purposes of grading will not be taken. However, regular attendance is strongly

Here are some university resources on COVID-19 and a link to the university's Exposure Action Chart.

The class meetings consist of interactive lectures, coding demonstrations, and problem solving. In short, the course will incorporate a lot of active learning in class. Thus, if you miss class, you miss out on these learning opportunities. Please, come to class as much as possible.

Short LDA course

Required devices. You will need access to a computer to be able to work on projects and homework. Please have your computer (or another

1. Course website: https://mcudina.github.io/page/M339J/M339J.html. I recommend bookmarking this course site in your default

browser for easy access.

2. Canvas will be used in this course to keep track of grades and for communication purposes. The students are responsible for the

classmates and myself. Rather than emailing questions to the instructor, I encourage you to post your questions on Ed Discussion. It is accessible via the menu on the left-hand side in Canvas.

promotes cheating. It is a violation of the University's Student Honor Code and an act of academic dishonesty. Any materials found online that

- Sharing of Course Materials is Prohibited. No materials used in this class, including, but not limited to, lecture hand-outs, videos, assessments (quizzes, exams, papers, projects, homework assignments), in-class materials, review sheets, and additional problem sets, may be shared online or with anyone outside of the class unless you have my explicit, written permission. Unauthorized sharing of materials
- are associated with you, or any suspected unauthorized sharing of materials, will be reported to Student Conduct and Academic Integrity in the Office of the Dean of Students. These reports can result in sanctions, including failure in the course. Class Recordings. Class recordings are reserved only for students in this class for educational purposes and are protected under FERPA. The recordings should not be shared outside the class in any form. Violation of this restriction by a student could lead to Student Misconduct

Homework assignments. Homework assignments will be available on the course website or in Canvas. You will be uploading your solutions using Canvas. Please, have your solutions in order and number the pages. Having read and understood this First-Day Handout in its entirety will count as the zeroth homework assignment. To get the credit, read this entire document with understanding by the homework deadline. Not handing in this assignment does not exempt you from abiding by this First-Day Handout. The lowest three homework scores will be

shared on the course website ahead of the exam itself. If you miss an exam due to illness or other extenuating circumstances, the final exam will take the weight of the in-term exam you missed. If you miss more than one in-term exam, you are strongly encouraged to seek assistance from the Office of the Dean of Students to explore what your options are in such a dire situation.

faculty, and staff as well as a concern submission form.
