M339D/M389D Syllabus

M339D/M389D: Introduction to Financial Mathematics for

Welcome to M339D/M389D! Here is some information and some ground rules. Read carefully and let me know if there is anything unclear by the twelfth day of classes, i.e., January 25th, 2023.

Basic info

Course meets. MWF 12noon - 12:50pm in PMA 5.122

Office Hours. MWF 10am-10:50am in PMA 13.142.

Instructor. Milica Cudina (she/her/hers); my office is PMA 13.142 (2515 Speedway, Austin, TX 78712).

Email. It's best to use Canvas to email the instructor. The instructor's email address is mcudina@math.utexas.edu.

The material exhibited includes: basic risk management, forward contracts, European call/put options, the binomial asset pricing model and its application to option pricing, the Black-Scholes pricing formula, delta-hedging, and Monte-Carlo simulations. The remainder of the Exam FAM curriculum is exhibited in courses M339J and M339U (also offered by the Department of Mathematics).

Learning outcomes.

• Using R to simulate random variables.

- Coding simple investment strategies in R.

- Linking the study of financial markets to that of classical insurance.
- Developing an understanding of the dynamics of stock prices, focusing on the renowned Black-Scholes model.
- Generalizing the risk-neutral pricing principle established in a discrete setting to the continuous model, namely, the Black-Scholes
- probability as presented in, e.g., Ross's First Course in Probability, Pitman's Probability or Asimow and Maxwell's Probability and Statistics

Students are **not** assumed to have any prior programming experience and the basics of R will be covered from scratch.

with Applications. Students are also assumed to be proficient in the time-value-of-money calculations both with effective and continuously compounded interest rates.

find this tab along the left side navigation in Canvas. To review a recording, simply click on the Lectures Online navigation tab and follow the instructions presented to you on the page. You can learn more about how to use the Lectures Online system at http://sites.la.utexas.edu/lecturesonline/students/how-to-access-recordings/.

provided on the course website. As noted above, we will be using the Lectures Online recording system. There will be no synchronous online option for this course. You are strongly encouraged to stay home if you are sick or contagious, not only to stop the spread of disease but also

of yourselves and your classmates. Here are some university resources on COVID-19 and a link to the university's Exposure Action Chart. If students are isolating, too sick to attend class, or experiencing another type of absence, they should:

If the **instructor** is isolating, or too sick to attend class, she will do her best to change class modality to Zoom (with an alternative instructor if

The class meetings consist of interactive lectures, coding demonstrations, and problem solving. In short, the course will incorporate a lot of active learning in class. Thus, if you miss class, you miss out on these learning opportunities. Please, come to class as much as possible.

device capable of running R) available in the exams as well.

The formulations and due dates for the group projects will be available on the course website.

from the Office of the Dean of Students to explore what your options are in such a dire situation.

There is no curve in this class and the letter grades are assigned according to the following table:

email the instructor as soon as they feel well enough to do so.

classmates and myself. Rather than emailing questions to the instructor, I encourage you to post your questions on Ed Discussion. It is Sharing of Course Materials is Prohibited. No materials used in this class, including, but not limited to, lecture hand-outs, videos,

assessments (quizzes, exams, papers, projects, homework assignments), in-class materials, review sheets, and additional problem sets, may

be shared online or with anyone outside of the class unless you have my explicit, written permission. Unauthorized sharing of materials

proceedings. Assessment and grading

Homework assignments. Homework assignments will be available on the course website or in Canvas. You will be uploading your solutions

using Canvas. Please, have your solutions in order and number the pages. Having read and understood this First-Day Handout in its entirety

will count as a part of the zeroth homework assignment. To get the credit, read this entire document with understanding by the homework

are introduced. However, every group-project will be done as part of a self-assigned group of students and require critical thinking and drawing logical conclusions.

The Final Exam. This course has a comprehensive final exam. If higher, the final-exam score substitute the score on your lowest in-term exam. For this course and section, according to the Registrar's office, the date and time of the final exam is Friday, April 28, 1:00pm-3:00pm. **Final grade.** The final grade is composed as follows:

In-term exams. There will be three in-term exams. All will be individual and conducted in-person in our classroom. The exam coverage will be

shared on the course website ahead of the exam itself. If you miss an exam due to illness or other extenuating circumstances, the final exam

will take the weight of the in-term exam you missed. If you miss more than one in-term exam, you are strongly encouraged to seek assistance

- Actuaries Spring 2023 Syllabus COURSE-SPECIFIC INFORMATION
- Course number. M339D/M389D (unique: 54720/55085)
- Course info Course description. This course is intended to provide the mathematical foundations necessary to prepare for a portion of the SOA Exam FAM. Additionally, the course is aimed at building the vocabulary and the techniques indispensable in the workplace at current financial and insurance institutions. This is not an exam-prep seminar. There is intellectual merit to the course beyond the ability to prepare for a professional exam.

 - Getting acquainted with the basics of financial markets.
 - Using the vocabulary associated with basic options and risk management in financial markets. Getting introduced to the mathematical notion of arbitrage.
 - Constructing a well-defined binomial asset pricing model. Mastering pricing by replication in the binomial asset pricing model.
- Generalizing the concept of sensitivity to perturbations of a single input encountered in calculus to the portfolio-price environment. Prerequisites. The formal prerequisite is the grade C- or better in M362K and M329F. Students are assumed to be at home with the basics of
- It should be stressed that this course is more sophisticated mathematically than is evident at first glance. I want you to be successful in this course, and for that to happen, a thorough understanding of probability and skillful application of notions from interest theory are necessary. **Lectures online.** This class is using the *Lectures Online* recording system. This system records the audio and video material presented in class for you to review after class. Links for the recordings will appear in the Lectures Online tab on the Canvas page for this class. You will

Class format and attendance. Attendance for the purposes of grading will not be taken. However, regular attendance is strongly recommended. In case you need to be absent, you are responsible for covering the missed material independently. Class notes will be to promote your personal wellness. I view this class as a community of learners. We cannot learn effectively when we are ill. Please, take care

Assignment

Homework

- recordings should not be shared outside the class in any form. Violation of this restriction by a student could lead to Student Misconduct
- The projects are designed to include open-ended problems which do not necessarily have a unique final answer. For that reason, there is no checklist-type rubric for the projects. In fact, as part of your first project submission, you will have to contemplate and formulate what quality work means for you!

Drop dates. The procedure/consequences are different, depending on whether you drop before or after the 4th day of classes (01/12), and then, before or after the main drop (Q-drop) date (03/21). (See https://ugs.utexas.edu/vick/academic/adddrop for details)

Students with Disabilities. The University of Texas at Austin provides upon request appropriate academic accommodations for qualified

students with disabilities. If you have a documented disability and you need specific support as a result of your disability, please let me know

as soon as possible, but definitely within the first 3 weeks of class. For more information, contact the Office of the Dean of Students at 471-

Counseling and mental health. Counseling and other mental-health services are available from Counseling and Mental Health Center,

Inclusion and equity. A climate conducive to learning and creating knowledge is the right of every person in our community. Bias,
