M339D/M389D Syllabus

M339D/M389D: Introduction to Financial Mathematics for Actuaries - Fall 2022 - Syllabus

Welcome to M339D/M389D! Here is some information and some ground rules. Read carefully and let me know if there is anything unclear by

COURSE-SPECIFIC INFORMATION

the twelfth day of classes, i.e., September 7th. This syllabus is subject to change; students who miss class are responsible for learning about any changes to the syllabus. .

Course number. M339D/M389D (unique: 55365/55690)

Basic info

Course meets. MWF 12noon - 12:50pm in PMA 5.120

Flags. QR (Quantitative Reasoning): This course carries the Quantitative Reasoning flag. Quantitative Reasoning courses are designed to

equip you with skills that are necessary for understanding the types of quantitative arguments you will regularly encounter in your adult and professional life. You should therefore expect a substantial portion of your grade to come from your use of quantitative skills to analyze realworld problems. Instructor. Milica Čudina (she/her/hers); my office is PMA 13.142 (2515 Speedway, Austin, TX 78712).

Email. It's best to use Canvas to email the instructor. The instructor's email address is mcudina@math.utexas.edu. The teaching assistant's

contact information will be shared at a later date by email. Office Hours. MWF 10am-10:50am in PMA 13.142.

Course info

Course description. This course is intended to provide the mathematical foundations necessary to prepare for a portion of the SoA Exam FAM. Additionally, the course is aimed at building up the vocabulary and the techniques indispensable in the workplace at current financial and

professional exam. The material exhibited includes: mean-variance portfolio theory, basic risk management, forward contracts, European call/put options, the binomial asset pricing model and its application to option pricing, the Black-Scholes pricing formula, delta-hedging, and Monte-Carlo simulations.

insurance institutions. This is not an exam-prep seminar. There is intellectual merit to the course beyond the ability to prepare for a

It should be stressed that this course is more sophisticated mathematically than is evident at first glance. A thorough understanding of probability and skillful application of notions from interest theory will be needed to advance through the varied and very dense material. The students will be required to actively participate in the class meetings and contribute to the successful conclusion of this course. The remainder of the Exam FAM curriculum is exhibited in courses M339J and M339U (also offered by the Department of Mathematics).

Learning objectives. • The student will become familiar with the basics of the programming language R and the RStudio IDE. They will learn how to use R to

simulate random variables.

 The student will get acquainted with the basics of financial markets. • The student will become competent in the study the relationship between exposure to risk and expected return of a financial investment.

- The student will acquire the vocabulary associated with basic options and risk management in financial markets.
- The student will construct a well-defined binomial asset pricing model. • The student will master pricing by replication in the binomial asset pricing model.

• The student will learn to appreciate the concept of diversification - useful in real life.

• The student will be introduced to the mathematical notion of arbitrage.

• The student will generalize the risk-neutral pricing principle established in a discrete setting to the continuous model, namely, the Black-

- The student will link the study of financial markets to that of classical insurance.
- Scholes model. • The student will generalize the concept of sensitivity to perturbations of a single input encountered in calculus to the portfolio-price

• The student will develop understanding of the dynamics of stock prices, focusing on the renowned Black-Scholes model.

- environment. Prerequisites. The formal prerequisite is the grade C- or better in M362K and M329F. Students are assumed to be at home with the basics of
- with Applications. Students are also assumed to be proficient in the time-value-of-money calculations both with effective and continuously compounded interest rates. Students are **not** assumed to have any prior programming experience and the basics of R will be covered from scratch.

Lectures online. This class is using the *Lectures Online* recording system. This system records the audio and video material presented in

class for you to review after class. Links for the recordings will appear in the Lectures Online tab on the Canvas page for this class. You will

probability as presented in, e.g., Ross's First Course in Probability, Pitman's Probability or Asimow and Maxwell's Probability and Statistics

find this tab along the left side navigation in Canvas. To review a recording, simply click on the Lectures Online navigation tab and follow the instructions presented to you on the page. You can learn more about how to use the Lectures Online system at http://sites.la.utexas.edu/lecturesonline/students/how-to-access-recordings/. You can find additional information about Lectures Online at: https://sites.la.utexas.edu/lecturesonline/.

Class format and attendance. Attendance for the purposes of grading will not be taken. However, regular attendance is strongly

recommended. In case you need to be absent, you are responsible for covering the missed material independently. Class notes will be

provided on the course website. As noted above, we will be using the Lectures Online recording system. There will be no synchronous online

option for this course. You are strongly encouraged to stay home if you are sick or contagious, not only to stop the spread of disease but also

to promote your personal wellness. Here are some university resources on COVID-19 and a link to the university's Exposure Action Chart.

• email the instructor as soon as they feel well enough to do so. If the **instructor** is isolating, or too sick to attend class, she will do her best to change class modality to Zoom (with an alternative instructor if the situation calls for such drastic measures and if it's possible). **Textbook.** There is no required textbook. Required devices. You will need access to a computer to be able to work on projects and homework. The instructor requests that you have your computer (or another device capable of running R) available in the exams as well.

1. Course website: https://mcudina.github.io/page/M339D/M339D.html. I recommend bookmarking this course site in your default

If **students** are isolating, too sick to attend class, or experiencing another type of absence, they should:

contact the Student Emergency Services immediately, and

3. Ed Discussion will be used for informal class discussion. The system is highly catered to getting you help fast and efficiently from classmates and myself. Rather than emailing questions to the instructor, I encourage you to post your questions on Ed Discussion. It is

2. Canvas will be used in this course to keep track of grades and for communication purposes. The students are responsible for the

content of these announcements. The easiest way not to miss any is to turn on (i.e., not turn off) Announcements in their account's

accessible via the menu on the left-hand side in Canvas.

browser for easy access.

proceedings.

- Sharing of Course Materials is Prohibited. No materials used in this class, including, but not limited to, lecture hand-outs, videos, assessments (quizzes, exams, papers, projects, homework assignments), in-class materials, review sheets, and additional problem sets, may be shared online or with anyone outside of the class unless you have my explicit, written permission. Unauthorized sharing of materials
- used for sharing materials, and any materials found online that are associated with you, or any suspected unauthorized sharing of materials, will be reported to Student Conduct and Academic Integrity in the Office of the Dean of Students. These reports can result in sanctions, including failure in the course.

Class Recordings. Class recordings are reserved only for students in this class for educational purposes and are protected under FERPA. The

recordings should not be shared outside the class in any form. Violation of this restriction by a student could lead to Student Misconduct

promotes cheating. It is a violation of the University's Student Honor Code and an act of academic dishonesty. I am well aware of the sites

Assessment and grading Homework assignments. Homework assignments will be available on the course website or in Canvas. You will be uploading your solutions using Canvas. Your solutions need to be in order and you should number the pages. Having read and understood this First-Day Handout in its entirety will count as a part of the zeroth homework assignment. To get the credit, read this entire document with understanding by the homework deadline. Not handing in this assignment does not exempt you from abiding by this First-Day Handout. The lowest three

homework scores will be dropped. The homework assignments and their due dates will be announced as the term progresses.

The formulations and due dates for the group projects will be available on the course website.

There is *no curve* in this class and the letter grades are assigned according to the following table:

6259, 471-4641 (TTY), 1-866-329-3986 (video phone) or go to http://ddce.utexas.edu/disability/

Education Code relate to absences by students and instructors for observance of religious holy days.

The projects are designed to include open-ended problems which do not necessarily have a unique final answer. For that reason, there is **no** checklist-type rubric for the projects. In fact, as part of your first project submission, you will have to contemplate and formulate what quality work means for you!

In-term exams. There will be three in-term exams. All will be individual and conducted in-person in our classroom. The exam coverage will be

The Final Exam. This course has a comprehensive final exam. For this course and section, according to the Registrar's office, the date and

Projects. There will be seven in-term group projects. The nature and content of the projects will be described in more detail as new

techniques are introduced. However, every group-project will be done as part of a self-assigned group of students and require critical thinking

Final grade. The final grade is composed as follows: **Assignment** Percentage of final grade

shared on the course website ahead of the exam itself. If you miss an exam due to illness or other extenuating circumstances, the final exam will take the weight of the in-term exam you missed. If you miss more than one in-term exam, you are strongly encouraged to seek assistance from the Office of the Dean of Students to explore what your options are in such a dire situation.

time of the final exam is **Monday, December** 12^{th} , 8:00am-10:00am.
